

Graduate Software Engineer

REPORTING TO: Software Group Lead

LOCATION: Shipley, West Yorkshire

Teledyne Defence & Space are looking for a Graduate Software Engineer to join their existing software team. In this role you will provide first line support to software users, this will include investigating problems, debugging software, fixing minor software bugs, completing software change paperwork, managing release updates.

On complex problems you will work alongside a senior engineer to determine/fix the problem and test & verify the solution. When not fixing urgent bugs, the role will involve requirements capture, testing new software (and equipment), gathering feedback from users.

Over time this role will expand to include more software engineering, thus allowing you to progress through the engineering grades, eventually becoming a mentor to a graduate who takes your place.

Main responsibilities for this role are:

- First Line support for internal software, assessing bug reports, investigating possible causes
- Software test & verification (this will include the use of test equipment and products)
- Managing the continuous build and software release process
- Installing & updating software used within the production facility
- Managing the bug tracking and source code control system
- Developing new software

The successful candidate will be able to satisfy the following requirements:

- Degree Level qualified
- Experience of working in a software development or testing environment
- Good computer skills in software testing/development and document writing
- Good communication skills
- A methodical and analytical approach to problem solving
- A willingness to learn
- An interest in bringing new techniques and technologies
- Experience of a wide range of software development tools

How to apply:

Please forward your CV to Janette Pattison, Recruitment Manager, Teledyne Defence & Space, Airedale House, Acorn Park, Shipley, West Yorkshire BD17 7SW or via email: janette.pattison@teledyne.com
